

Usage instructions HOLOGRAM ART Egg Decorating Kit

• Liquid egg dyes:

Use warm and boiled eggs.

1. Separate each color with scissors.
2. Cut the tip of the desired color and pour it into a bowl.
3. Add 5 oz of hot water and 2-3 tablespoons of vinegar.
4. Bend the metal holder and dip the eggs one by one.
5. Remove the egg from the solution after obtaining the desired color and let it dry on the drying tray.

Hologram stickers:

Use already colored or not colored, cool and dry boiled eggs.

1. Wash and dry your hands.
2. Take the stickers sheet and gently peel off the white film so that the clear layer remains attached to the yellow paper.
3. Take a dry dyed or undyed egg and gently transfer the sticker from the yellow backing to the egg shell.
4. Take a sheet of the color of your choice from the hologram foils and press the matte side of the sheet to the sticker.
5. Rub it well with your finger and then gently remove it. If there are spots that are not covered by the foil then press again using other part of the foil sheet.

Tip: Do not use twice the same part of the foil sheet that has already been used.

• Egg stands:

Use scissors to cut the egg stands from the sides of the box and assemble them by inserting cutting 1 into cutting 2.

• Drying tray:

Punch out the pre-cut circles from the back of the box and use it as a drying tray.
